Currently building Foundation in HTML ,CSS,JS .Quick learner with

Strong problem solving Skills.

PERSONAL PROJECTS

Car Parking Management System

Developed a console-based application to manage vehicle entry/exit and parking slot allocation. Solved manual tracking issues and automated slot availability checking. Implemented using C++ . Built logic for vehicle records, billing calculation, and parking status.

BIIT Calendar

Created a desktop application for managing university events and academic schedules. Replaced paper notices with centralized digital calendar. Developed using Java with OOP concepts.

Library Management System

Built a system to manage book inventory, student records, and issue/return operations. Database. Added features for book search, fine calculation, and overdue record tracking.

Medicine Management System

Designed an inventory management system for pharmacies to track medicine stock and expiry dates.

Airline Management System

Developed a flight reservation system to manage schedules, passenger bookings, and seat allocation. Created logic for flight search, booking confirmation, and cancellation with data stored in Database,

Product Reviews Management System

Created a console application for collecting and displaying product reviews and ratings. Helped gather customer feedback for product improvement. Developed in Java with Database. Implemented review submission, average rating calculation, and data validation to prevent duplicates.

Restaurant Management System (Windows Form Application)

Built a desktop application for order management, billing, and table reservations. Improved order accuracy and service speed for restaurant operations. Developusing C# Windows Forms with SQL Server database. Implemented menu management, real-time order tracking, and daily sales report generation. Handled complete UI design and database connectivity..
